SYLVAN HEIGHTS  
BIRD PARK

## MAZE

These Black-bellied Whistling Ducklings just hatched and need your help! Guide them through the maze so they can join their parents to start life on the pond.

START

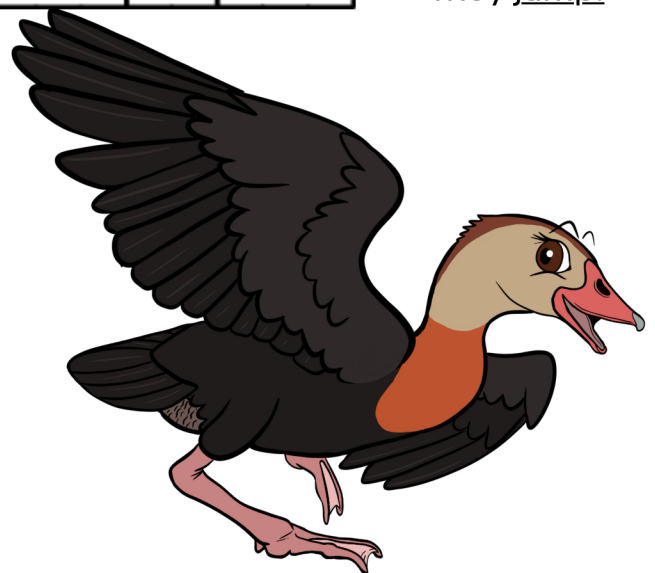

Black-bellied Whistling Ducks are native to Central America and South America.

When the eggs hatch, the parents are not able to care for the ducklings in the nest. They leave the nest and call to encourage the ducklings to follow.

Females choose nests high up in tree cavities. She can lay up to 10 eggs. The tree cavities can be as high as 50 feet!

The ducklings cannot fly when they hatch. So, how do they leave the nest and join their parents? They jump!
